1. CONTRAST OF MISCELLANEOUS PARTS

NOTES :

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

$560\Omega \rightarrow 56 \times 10^1 \rightarrow 561$ RD1/8PM [5] [6] [1] J

$47k\Omega \rightarrow 47 \times 10^3 \rightarrow 473$ RD1/4PS [4] [7] [3] J

$0.5\Omega \rightarrow 0R5$ RN2H [0] [R] [5] K

$1\Omega \rightarrow 010$ RS1P [0] [1] [0] K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

$5.62k\Omega \rightarrow 562 \times 10^3 \rightarrow 5621$ RM1/4PC [5] [6] [2] [1] F

PD-F1004/KU/CA and PD-F904/KU/CA have the same construction except for the following :

3. SCHEMATIC AND PCB CONNECTION DIAGRAMS

3.1 MECHA BOARD ASSY, SENSOR BOARD ASSY, LOADING BOARD ASSY, SELECT MOTOR BOARD ASSY, LOADING MOTOR BOARD ASSY AND MECHANISM BOARD ASSY

A NOTE FOR SCHEMATIC DIAGRAMS (Type 4A)

1. When ordering service parts, be sure to refer to "PARTS LIST of EXPLODED VIEWS" or "PCB PARTS LIST".

2. Since these are basic circuits, some parts of them or the values of some components may be changed for improvement.

3. RESISTORS:
Unit: kΩ, MΩ, or Ω unless otherwise noted.
Rated power: 1/4W, 1/6W, 1/8W, 1/10W unless otherwise noted.
Tolerance: (F): ±1%, (G): ±2%, (K): ±10%, (M): ±20% or ±5% unless otherwise noted.

4. CAPACITORS:
Unit: pF or μF unless otherwise noted.
Ratings: capacitor (μF)/ voltage (V) unless otherwise noted.
Rated voltage: 50V except for electrolytic capacitors.

5. COILS:
Unit: mH or μH unless otherwise noted.

6. VOLTAGE AND CURRENT:
DC voltage (V) in PLAY mode unless otherwise noted:
mA or - mA:
DC current in PLAY mode unless otherwise noted.
Value in () is DC current in STOP mode.

7. OTHERS:
• 0 or 0 : Adjusting point.
• : Measurement point.
• The Δ mark found on some component parts indicates the importance of the safety factor of the parts. Therefore, when replacing, be sure to use parts of identical designation.

8. SCH-□ ON THE SCHEMATIC DIAGRAM:
• SCH-□ indicates the drawing number of the schematic diagram. (SCH stands for schematic diagram.)

9. SWITCHES (Underline indicates switch position):

SELECT MOTOR BOARD ASSY

NOTE FOR PCB DIAGRAMS:

1. Part numbers in PCB diagrams match those in the schematic diagrams.
2. A comparison between the main parts of PCB and schematic diagrams is shown below.

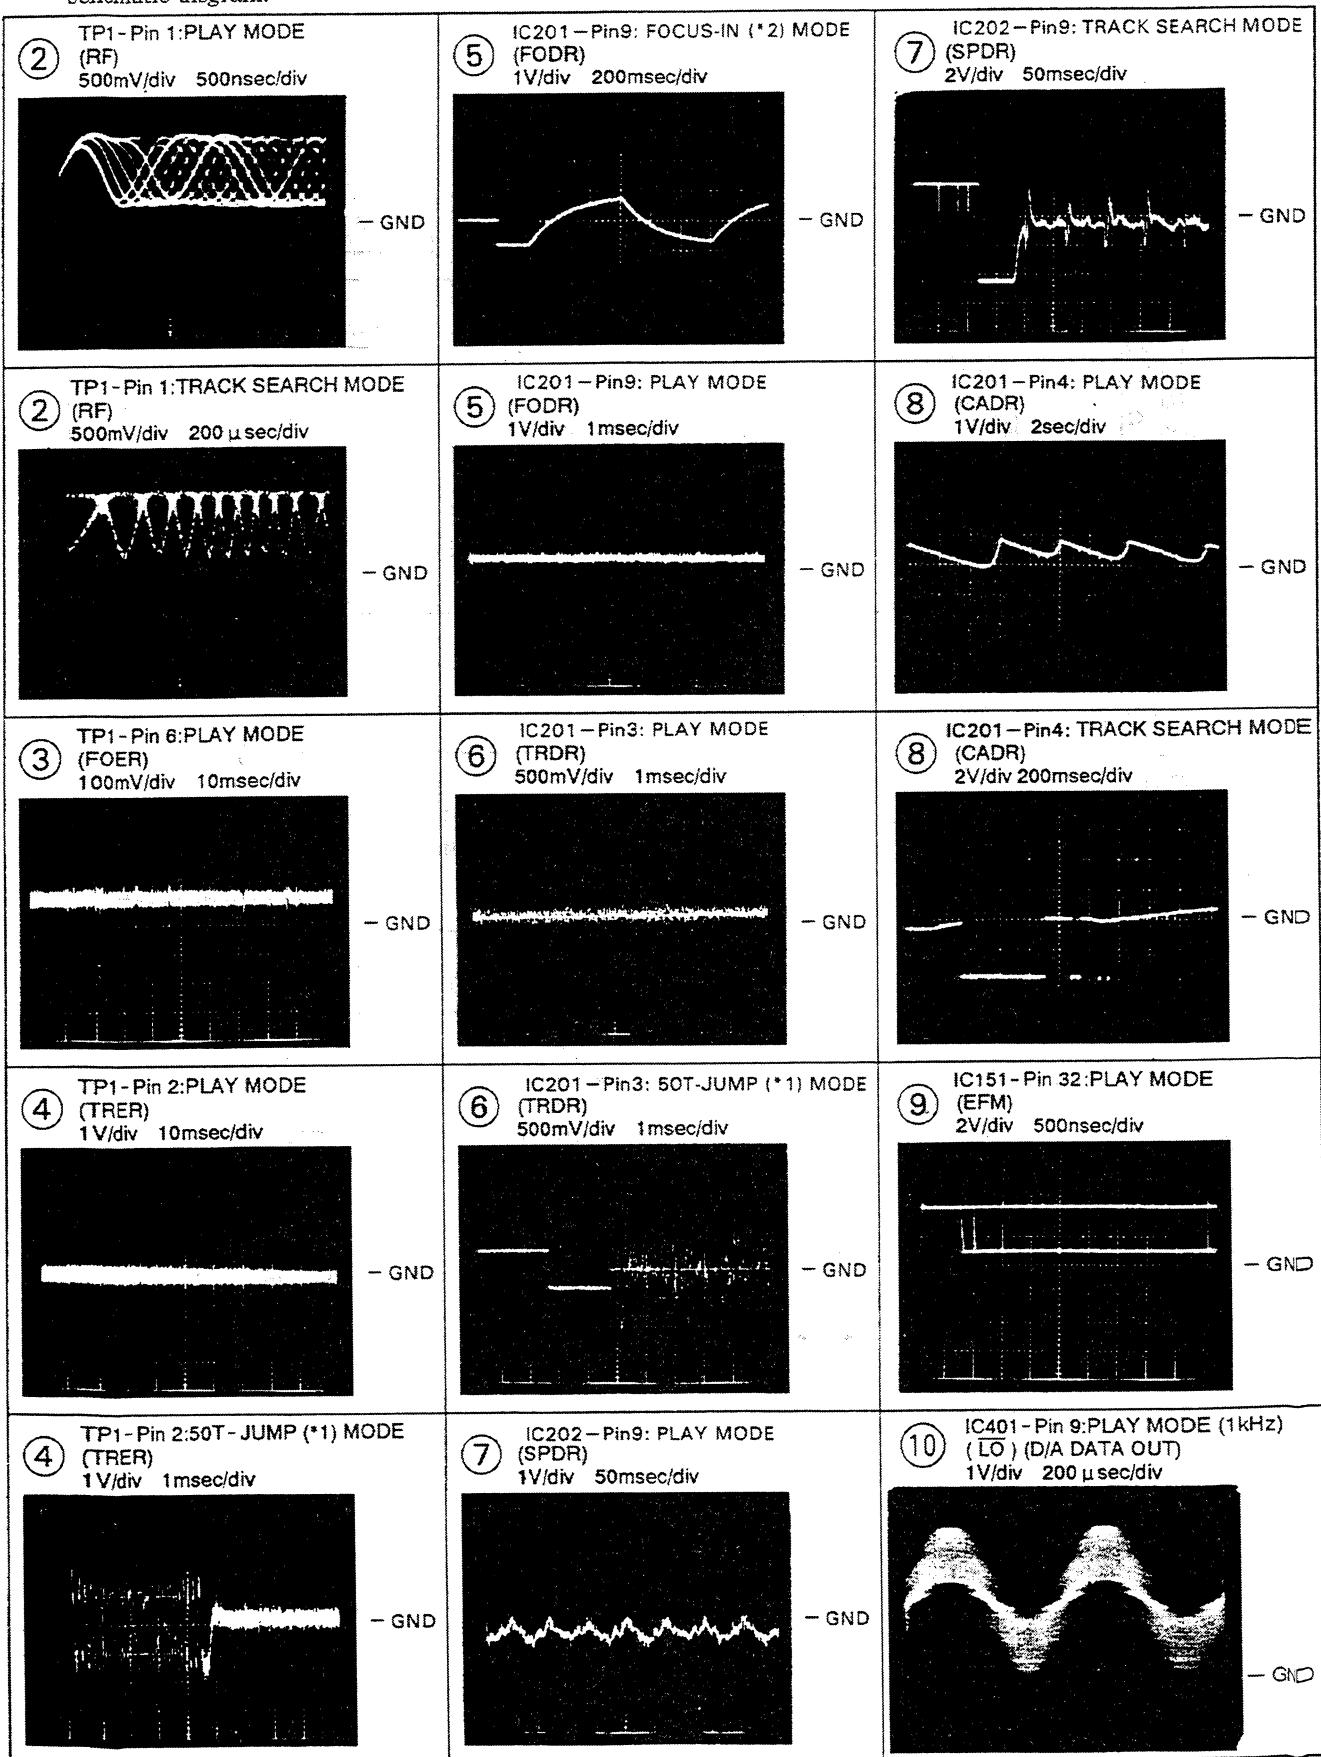

Symbol in PCB Diagrams	Symbol in Schematic Diagrams	Part Name
		Transistor
		Transistor with resistor
		Field effect transistor
		Resistor array
		3-terminal regulator

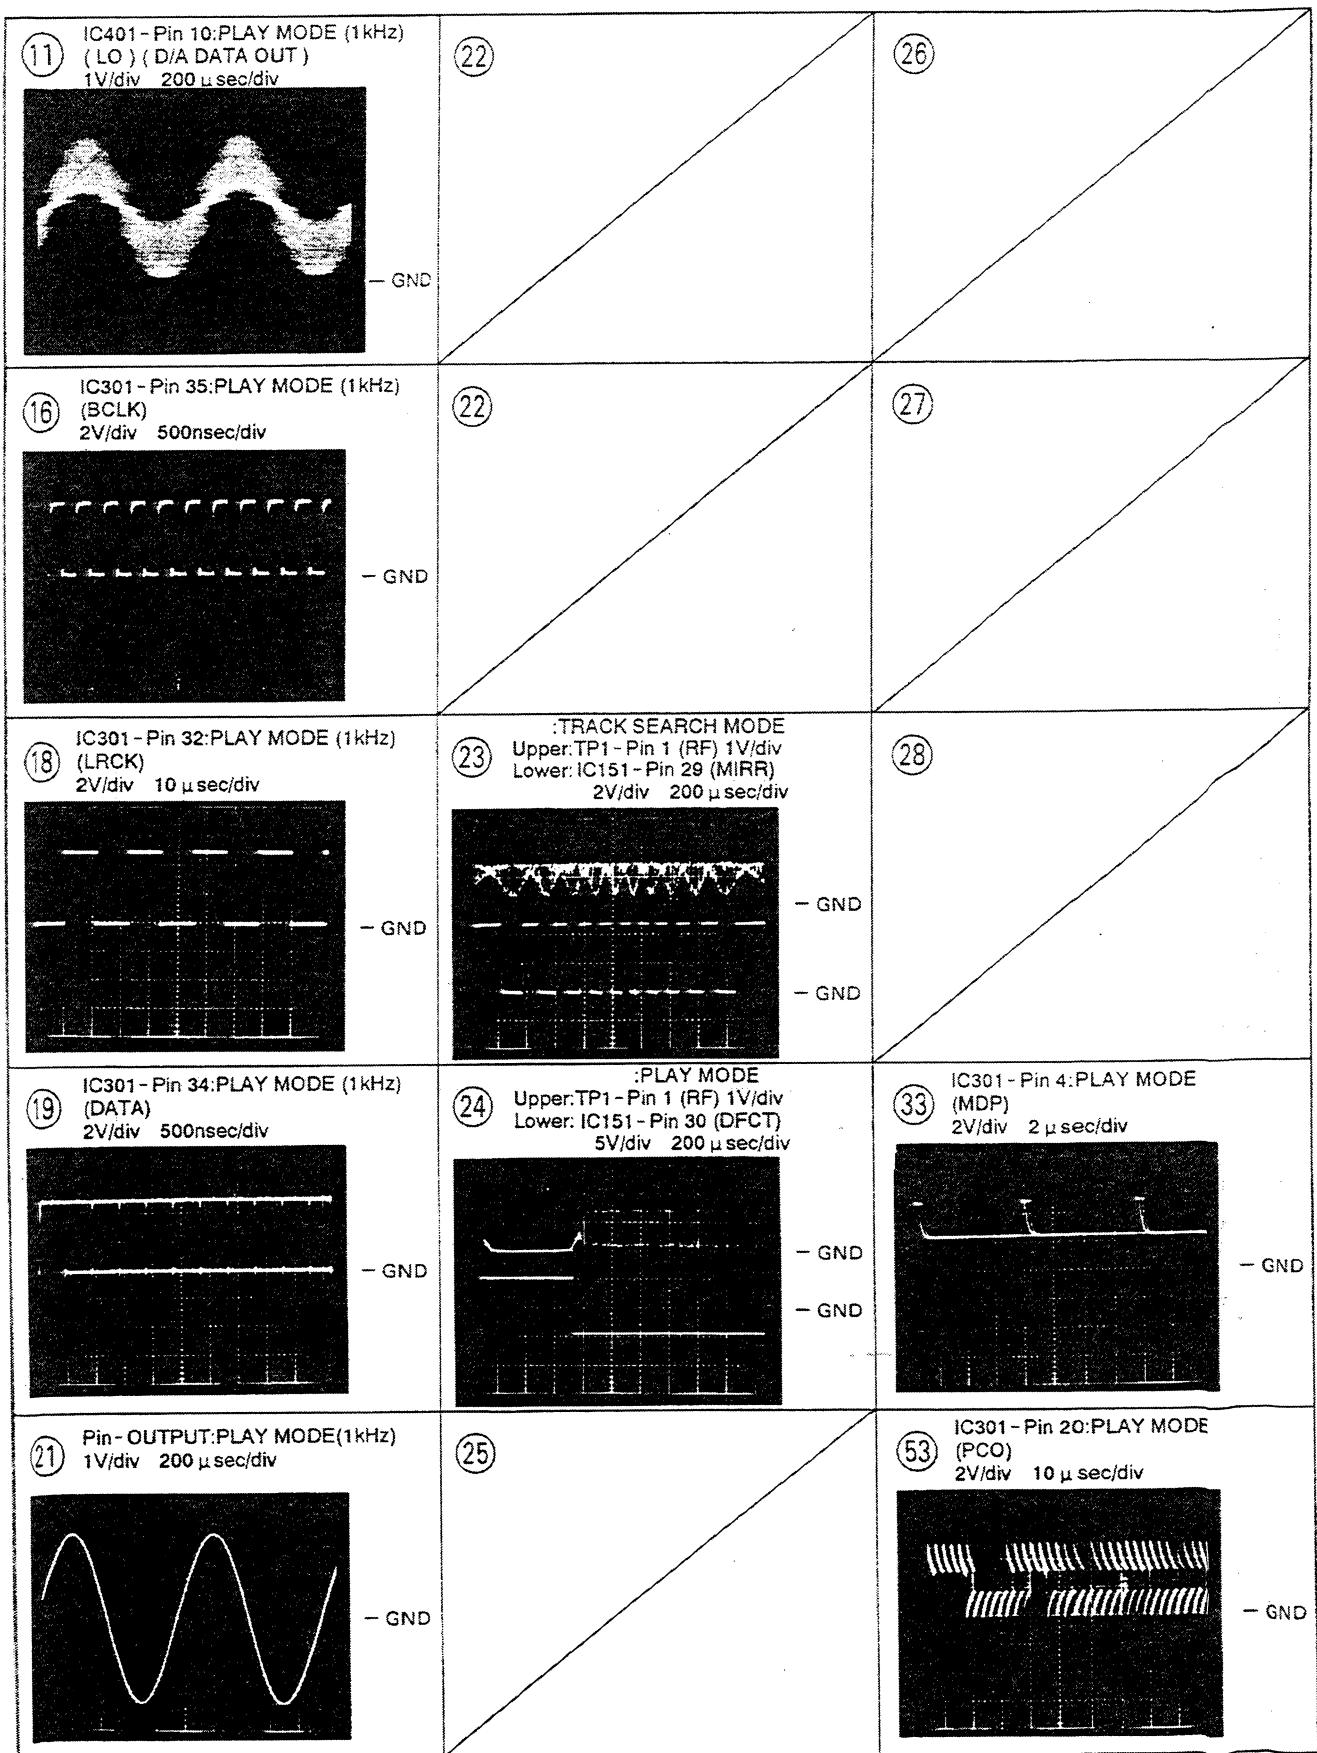

Waveforms of MAIN BOARD Assy

Note: The encircled numbers denote measuring point in the schematic diagram.

*1 50T-JUMP: After switching to the pause mode, press the manual search key.

*2 FOCUS-IN: Press the key without loading a disc.

4. IC INFORMATION

- The information shown in the list is basic information and may not correspond exactly to that shown in the schematic diagrams.

■ PD3316A (IC351 : MAIN BOARD ASSY)

● System Control IC, CMOS IC

SR Input, System Control, Display Data Serial Transmission

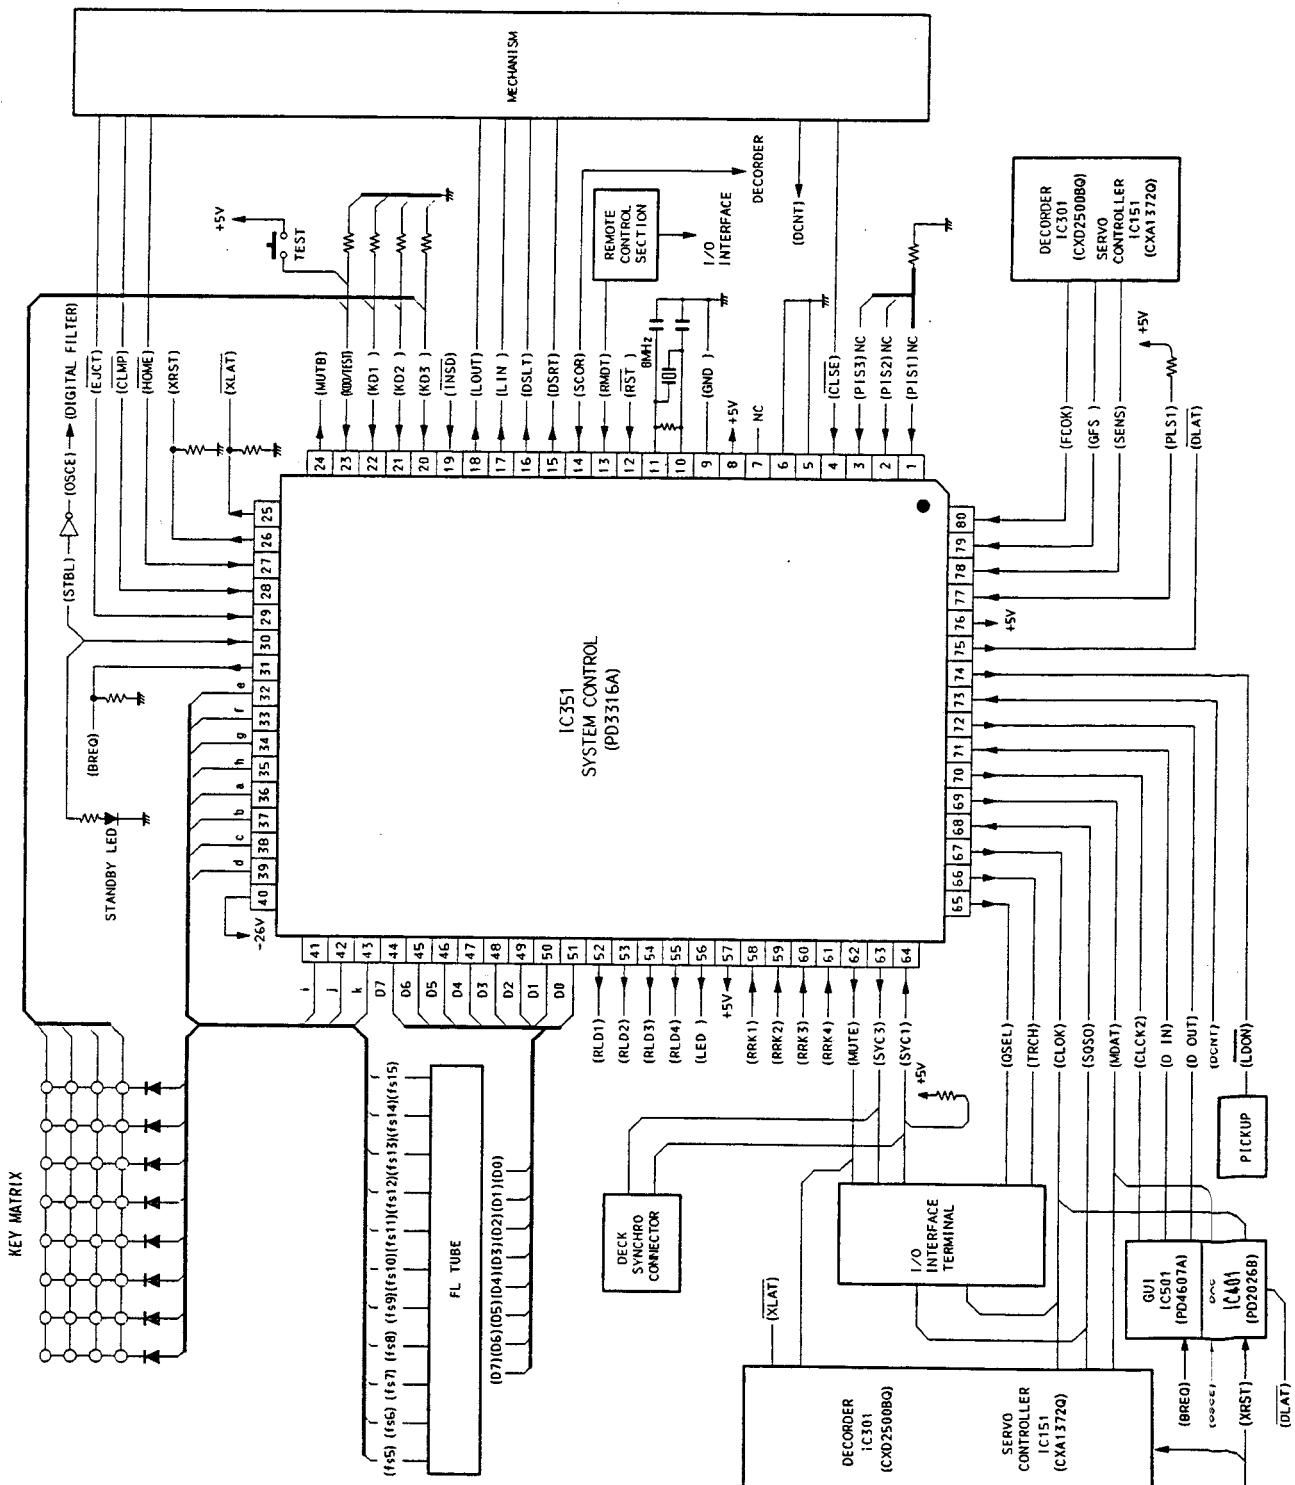

● Pin Function

No.	Symbol	Pin Name	I/O	Description
1	P04/AN4	P1S1	I	Connected to GND. (+1 disc detection input)
3	P06/AN6	P1S3		
4	P07/AN7	CLSE	I	Door close OK SW (L: Close OK)
5	AVss	No use	GND	(Reference voltage for A/D converter): GND
6	TEST	No use	GND	(Test terminal for maker): GND
7	X2	No use	-	(Sub clock oscillator connected terminal): OPEN
8	X1	No use	+5V	(Sub clock oscillator connected terminal): Vcc
9	Vss	Vss	GND	GND
10	OSC1	OSC1	-	Connected to System clock oscillator (8MHz)
11	OSC2	OSC2	-	
12	RES	RST	I	CPU reset (L: Reset)
13	P10/IRQ0	RDMT	I	Remote control data input (For I/O INTERFACE)
14	P11/IRQ1	SCOR	I	Sub code sinc S0+S1 input
15	P12/IRQ2	DRST	O	Selector output port Right direction (DRST: H, DSLT: L) Left direction (DRST: L, DSLT: H)
16	P13/IRQ3	DSLT	O	
17	P14/IRQ4	LIN	O	Loading output port Clump (LIN: L, LOUT: H) Return (LIN: H, LOUT: L)
18	P15/IRQ5 /TMOE	LOUT	O	
19	P16/EVENT	INSD	I	Slider INSIDE SW input (L: INSIDE)
20	P33/FS27	KD3	I	
22	P31/FS25	KD1	I	Key • data input
23	P30/FS24	KD0/TEST	I	Key • data input TEST mode request input (H: TEST, L: Normal mode)

No.	Symbol	Pin Name	I/O	Description
24	P47/FS23	MUTB	O	Muting output (L: MUTE)
25	P46/FS22	XLAT	O	LSI control data ratch pulset
26	P45/FS21	XRST	O	Reset output for each LSI
27	P44/FS20	HOME	I	Disc selector home SW (L: Home)
28	P43/FS19	CLMP	I	Clump SW (L: Clump OK)
29	P42/FS18	EJCT	I	Loading out SW (L: Loading out OK)
30	P41/FS17	STBL	O	Stand-by LED light-up output (H: Light-up, OSCE output)
31	P40/FS16	BREQ	O	Request port for sub micro-computer (H: transmission)
32	P50/FS15	SEG E	O	Segment output for FL drive
35	P53/FS12	SEG H		
36	P54/FS11	SEG A	O	Segment output for FL drive
39	P57/FS8	SEG D		
40	P17/Vdisp	Vdisp	I	-26V
41	P60/FD0/FS7	SEG I	O	Segment output for FL drive
43	P62/FD2/FS5	SEG K		
44	P63/FD3/FS4	D7	O	Digit output for FL drive
48	P67/FD7/FS0	D3		
49	P70/FD8	D2	O	Digit output for FL drive
51	P72/FS10	D0		
52	P73/FS11	RLD1	O	LED light-up output for Rack1 (L: light-up)
53	P74/FS12	RLD2	O	LED light-up output for Rack2 (L: light-up)
54	P75/FS13	RLD3	O	LED light-up output for Rack3 (L: light-up)
55	P76/FS14	RLD4	O	LED light-up output for Rack4 (L: light-up)

No.	Symbol	Pin Name	I/O	Description
56	P77/FD15	LED	O	Output for LED light-up
57	Vcc	Vcc	-	+5V
58	P80	RRK1	I	Rack1 Yes/No SW (L: No)
59	P81	RRK2	I	Rack2 Yes/No SW (L: No)
60	P82	RRK3	I	Rack3 Yes/No SW (L: No)
61	P83	RRK4	I	Rack4 Yes/No SW (L: No)
62	P84	MUTE	O	Muting OUTPUT (H: MUTE) (For I/O INTERFACE)
63	P85	SYC3	O	DECK SYNCHRO signal output (For I/O INTERFACE)
64	P86	SYC1	I	DECK SYNCHRO signal input (For I/O INTERFACE)
65	P87	QSEL	O	Signal output for QDATA discrimination (H: During output of Q DATA) (For I/O INTERFACE)
66	P90/PWM	TRCH	O	Data serial output (For I/O INTERFACE)
67	P91/SCK1	CLOK	O	LSI serial clock output (For I/O INTERFACE)
68	P92/SI1	SQSO	I	Sub code Q data serial input (For I/O INTERFACE)
69	P93/SO1	MDAT	O	LSI control data serial output
70	P94/SCK2	CLK2	O	Clock for sub micro-computer
71	P95/SI2/CS	D IN	I	Data input for sub micro-computer
72	P96/SO2	D OUT	O	Data output for sub micro-computer
73	P97/UD	DCNT	I	Disc count pulse input
74	PA0	LDON	O	Laser diode output (L: ON, H: OFF)
75	PA1	DLAT	O	DAC control data ratch pulse

● Pin Function

No.	Pin Name	I/O	Description
1	YIN	I	Not used Luminance signal input terminal at the time of superimpose display. A DC playback (DC clamped) 2 Vp-p (sync chip level 1 V, pedestal level 1.57 V) signal is given as input.
2	CIN	I	Not used Saturation signal input terminal at the time of superimpose display. A signal with a DC voltage of 1.57 V and a color burst signal amplitude of 0.57 Vp-p is given as input.
3	VIN	I	Not used Composite video signal input terminal at the time of superimpose display. A DC playback (DC clamped) 2 Vp-p (sync chip level 1 V, pedestal level 1.57 V) signal is given as input.
4	AVcc	-	Analog power supply terminal. Same potential as for the Vcc terminal.
5	FSCO	O	This signal indicates the internal color burst phase. Superimpose color display can be executed by controlling the EXS terminal input clock so that the phase of this signal and the color burst phase of the external video signal become the same at the time of external sync control operation. Output control is executed with the FO bit of command 7.
6	VBLK	O	Not used Vertical blanking period signal output terminal. Low-level output is executed during the vertical blanking period.
7	Vcc	-	Power supply terminal.

No.	Pin Name	I/O	Description
8	EXS	I	External circuit terminals of the color burst clock generator. A crystal oscillator circuit is formed by external connection of a crystal oscillator (NTSC: 14.31818 MHz, PAL: 17.734475 MHz) and a load capacitance (C).
9	XS	O	
10	<u>H</u> SYNC	O	Not used Horizontal sync signal output terminal. Also used as composite sync signal output terminal. By low level for the TEST terminal, the color burst oscillation clock divided by four (fsc) is put out.
11	<u>V</u> SYNC	O	Not used Vertical sync signal output terminal. By low level for the TEST terminal, the oscillation clock for the dot clock is put out.
12	<u>E</u> XH <u>S</u> YN	I	Not used External horizontal sync signal input terminal. Also used as composite sync signal output terminal. This is a hysteresis input with internal pull-up.
13	<u>E</u> XV <u>S</u> YN	I	Not used External vertical sync signal input terminal. This is a hysteresis input with internal pull-up.
14	Vss	-	Ground terminal
15	EXD	I	External circuit terminals for the display dot clock generator.
16	XD	O	An LC oscillation circuit is formed by external connection of L and C.
17	VOB	O	Not used Character + background period signal output terminal. At the time of internal sync control operation, all output periods for characters, character background, line background, and screen background are shown. At the time of external sync control operation, the output periods for characters, character background, and line background are shown.
18	VOC2	O	Not used Color signal output terminals. Character color, character background color, line background color, and screen background color are put out.
19	VOC1		
20	VOC0		
21	TEST	I	Test signal input terminal. Normally high level (fixed) is given as input. (Do not issue a command in case of input of low level.)
22	SCLK	I	Shift clock input terminal for serial transfer. This is a hysteresis input with internal pull-up.
23	SIN	I	Serial data input terminal. This is a hysteresis input with internal pull-up.
24	<u>C</u> S	I	Chip select terminal. This is set to low level for serial transfer. Also used for cancellation of power-on reset. This is a hysteresis input with internal pull-up.
25	VOUT	O	Composite video signal output terminal. A 2 Vp-p (sync chip level 1 V, pedestal level 1.57 V) signal is put out.
26	COUT	O	Not used Saturation signal output terminal. A signal with a DC voltage of 1.57 V and a color burst signal amplitude of 0.57 Vp-p is put out.
27	YOUT	O	Not used Luminance signal output terminal. A 2 Vp-p (sync chip level 1 V, pedestal level 1.57 V) signal is put out.
28	AVss	-	Analog ground terminal. Same potential as Vss.

5. ADJUSTMENTS

Note: Adjustment of PD-F1004/KU/CA is the same as that of PD-F904/KU/CA except for the following:

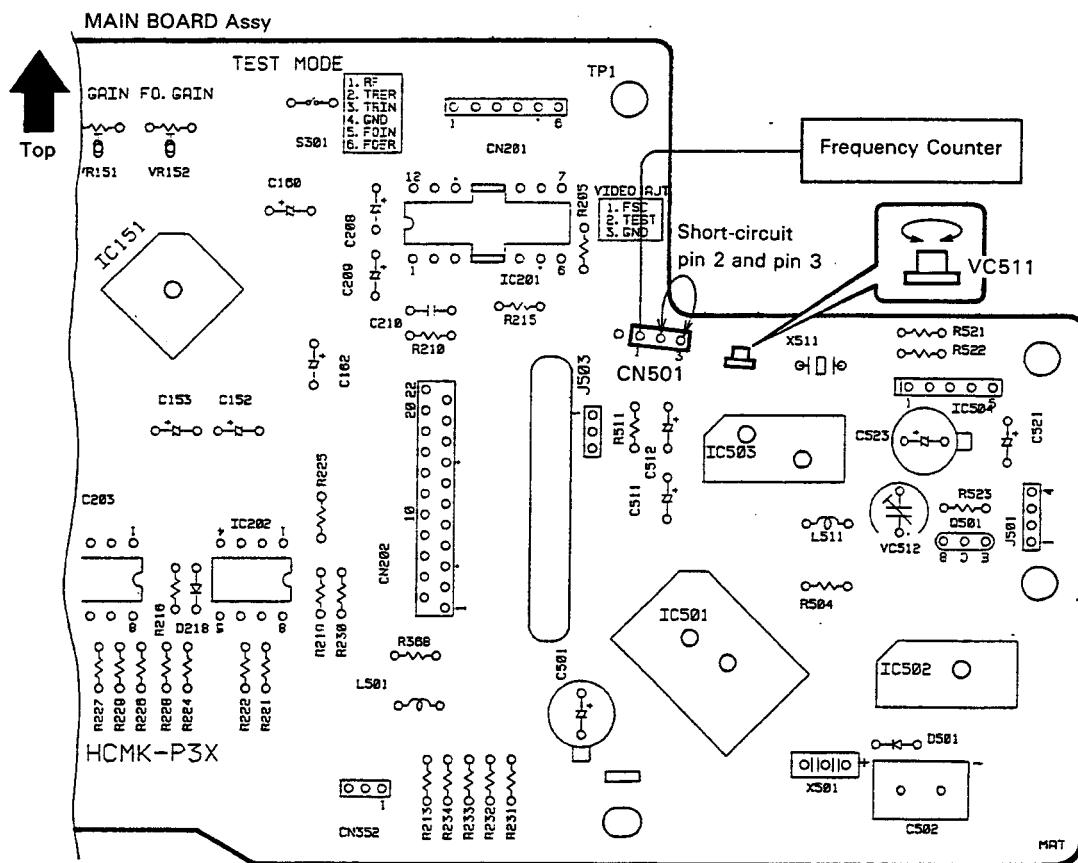

■ CHROMA FREQUENCY ADJUSTMENT

Symptom when out of adjustment:

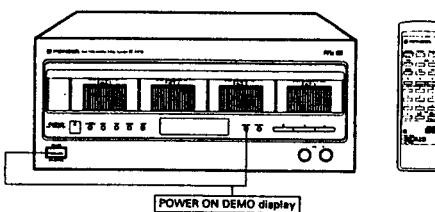

The TV picture is not in color (Black-and-white picture).

Procedure

1. Short-circuit pin 2 and pin 3 of connector CN501 of the MAIN BOARD assy.
 2. Connect a frequency counter to pin 1 of CN501. Adjust VC511 so that the frequency is within 3.579545 MHz \pm 5 Hz.

1. SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

Lead in solder used in this product is listed by the California Health and Welfare agency as a known reproductive toxicant which may cause birth defects or other reproductive harm (California Health & Safety Code, Section 25249.5).

When servicing or handling circuit boards and other components which contain lead in solder, avoid unprotected skin contact with the solder. Also, when soldering do not inhale any smoke or fumes produced.

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols (fast operating fuse) and/or (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible (fusible de type rapide) et/ou (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

(FOR USA MODEL ONLY)

1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60 Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5 mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

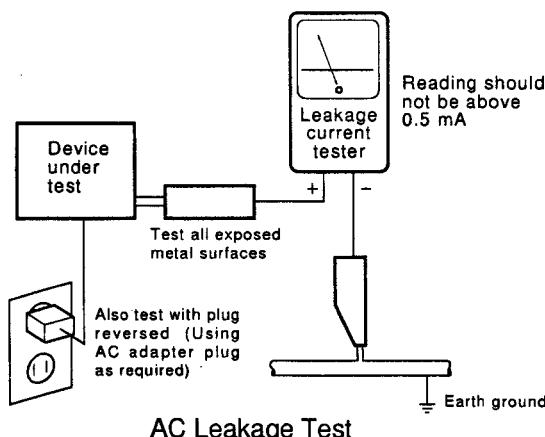

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a Δ on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

2. SPECIFICATIONS

1. General

Type	Compact disc digital audio system
Power requirements	AC 120 V, 60 Hz
Power consumption	12 W
Operating temperature	+5°C - +35°C (+41°F - +95°F)
Weight	11.0 kg (24 lb 4 oz)
External dimensions	420(W) X 399(D) X 190(H) mm 16-9/16(W) X 15-11/16(D) X 7-1/2(H) in

2. Audio section

Frequency response	2 Hz - 20 kHz
S/N ratio	98 dB or more (EIAJ)
Dynamic range	96 dB or more (EIAJ)
Channel separation	96 dB or more (EIAJ)
Harmonic distortion	0.003 % or less (EIAJ)
Level difference between channels	1.0 dB or less (EIAJ)
Output voltage	2 ± 0.3 Vrms (EIAJ)
Wow and flutter	less than ±0.001% (W.PEAK) (below measurable level) (EIAJ)
Channels	2-channel (stereo)

3. Output terminal

Audio line output	
Control input/output jacks	
CD-DECK SYNCHRO jack	
I/O INTERFACE	

4. Functions

Number of discs to be stored - maximum 100.

Basic Operation Buttons

- PLAY, PAUSE, STOP

Playback mode

- All Playback Mode
- Single Playback Mode
- Custom Playback Mode

Search Function

- Disc Search
- Track Search
- Manual Search

Programming

- Maximum 32 steps
- Pause
- Program Clear (single track or all tracks)

Repeat Functions

- 1 Track Repeat
- Single Repeat
- All Discs Repeat
- Program Repeat
- Single Random Repeat
- All Discs Random Repeat
- Custom Random Repeat
- Custom Repeat

Random Play

- Random Play (repeat also available)

Switching Display

Disc/Track Number, Time Consumed (track/disc), and Total Time

ADLC

Automatic Digital Level Controller

Memory Hold

Stored Playback Mode, Program Contents, or Custom Mode

Last Disc Memory

3. PANEL FACILITIES

FRONT PANEL

① POWER STANDBY/ON switch

② Remote sensor

Receives the signal from the remote control unit.

③ RANDOM button

④ ADLC button

⑤ TIME button

⑥ MODE button

⑦ CLEAR button

⑧ Display window

⑨ Track/Manual search buttons

(◀◀◀ / ▶▶▶)

⑩ Stop button (■)

⑪ DISC buttons (-/+)

⑫ Play button (▶)

⑬ Pause button (II)

⑭ PLAY INDICATOR

⑮ Rack 1

⑯ Rack 2

⑰ Rack 3

⑱ Rack 4

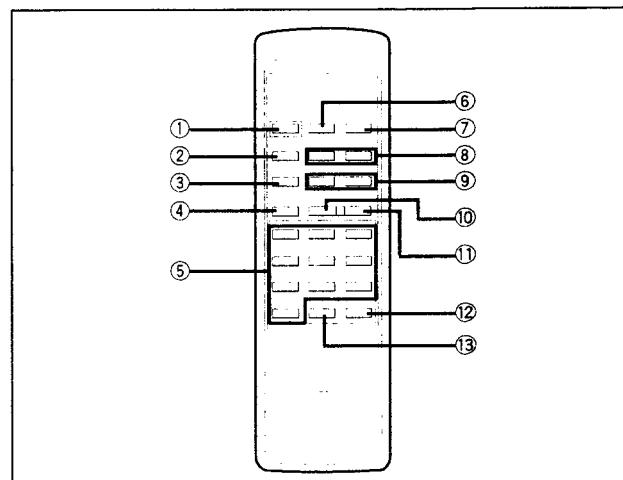

⑲ EJECT button for Rack 1 (▲)

⑳ EJECT button for Rack 2 (▲)

㉑ EJECT button for Rack 3 (▲)

㉒ EJECT button for Rack 4 (▲)

REMOTE CONTROL UNIT

Remote control buttons with the same names or marks as buttons on the front panel of the player control the same operations as the corresponding front panel buttons.

① POWER button

② PGM button

③ MODE button

④ Stop button (■)

⑤ Digit buttons (0 - 9)

⑥ REPEAT button

⑦ RANDOM button

⑧ DISC buttons (-/+)

⑨ Track search buttons (◀◀◀ / ▶▶▶)

⑩ Pause button (II)

⑪ Play button (▶)

⑫ TRACK SET button

⑬ DISC SET button

4. DISASSEMBLY

4.1 REMOVAL OF LOADING MECHANISM ASSY

1. Remove the bonnet. (At this time, return the loading mechanism assy to the home position if it is not in the home position.)
2. Remove the rivet and then remove the rope unit.
3. Remove the four screws ① and then remove the select guide.
4. Remove the flat cable from the connector (CN625), and also remove the rope unit from the loading mechanism assy.
5. Raise the loading mechanism assy and remove it.

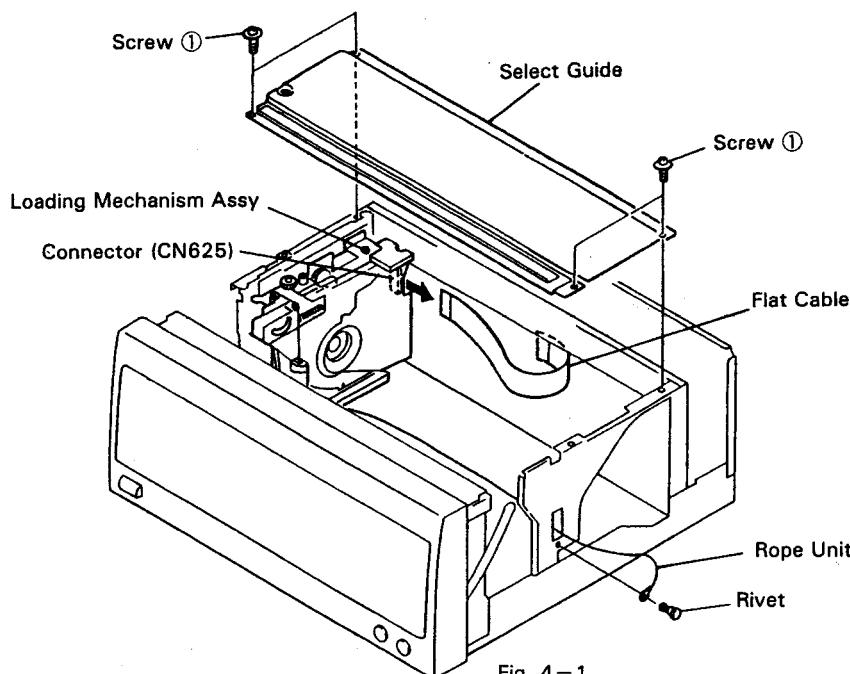

Fig. 4-1

Note) Execute assembly in reverse order of the disassembly.

However, the following items must be executed.

- Synchronization matching for upper and lower gear

Adjust the relation between the sub gear teeth and the select guide as shown in Fig. 4-2.

- Position confirmation for body and loading mechanism assy

Looking from the top, conform that part ④ of the gear angle B and part ⑤ of the angle L are parallel. (Refer to Fig. 4-3.)

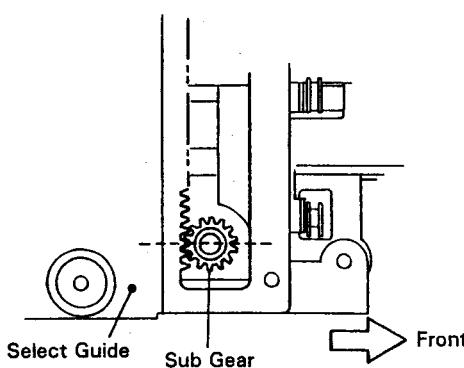

Fig. 4-2

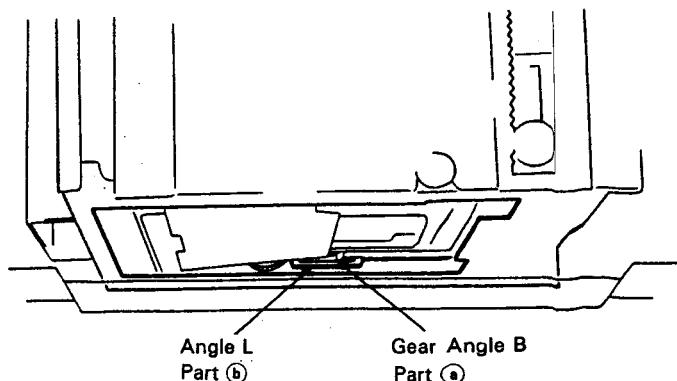

Fig. 4-3

4.2 REMOVAL OF SERVO MECHANISM ASSY

1. Remove the loading mechanism assy. [Refer to "4.1 REMOVAL OF LOADING MECHANISM ASSY".]
2. Remove the screw ① and the clamper base.
3. Remove the stopper. (At this time, remove the stopper spring at the same time.)
4. Remove the arm spring.
5. Remove the three screws ③ fixing the D cup, remove the screw ④ fixing the side angle and the connector (CN626), and then remove the D cup and the side angle.
6. Remove arm A, arm B, and the connecting rack.
7. Remove the four screws ⑤ fixing the servo mechanism assy. Remove the flexible circuit board of the pickup assy from the connector (CN621) and pull out the servo mechanism assy.
8. Remove the connector (CN610) of the servo mechanism assy and then remove the servo mechanism assy.

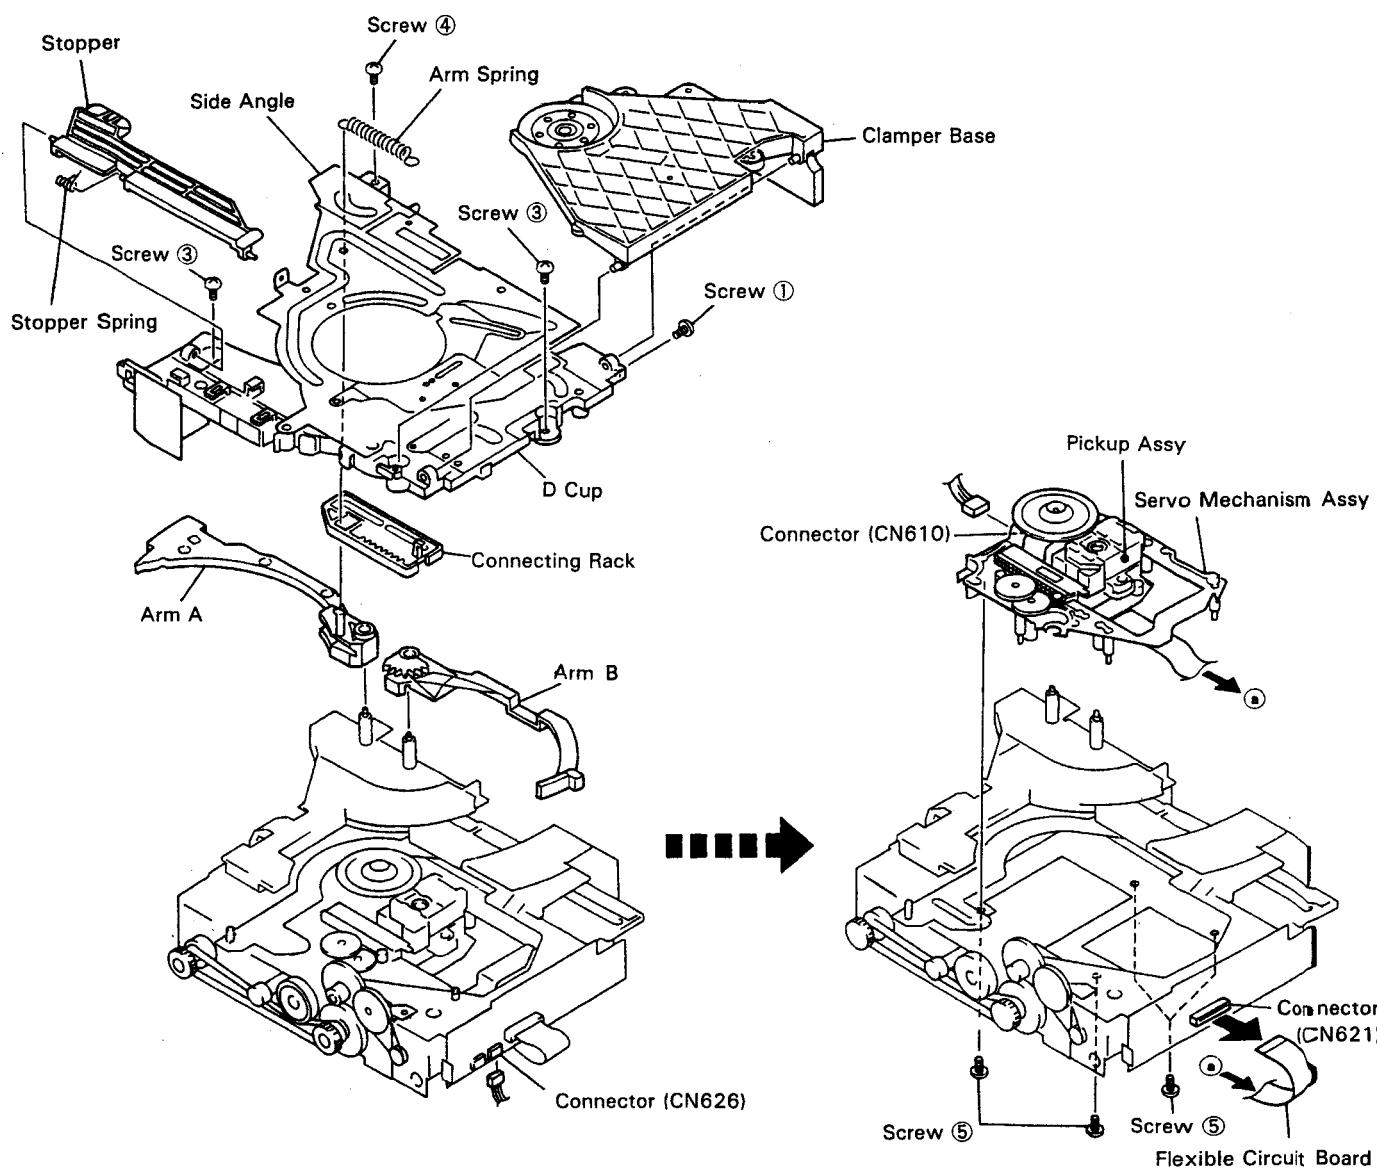

Fig. 4-4

Note) Execute assembly in reverse order of the disassembly.
However, the following items must be executed.

● Synchronization matching for arm A, arm B and connecting rack

Confirm correct positioning of the drive plate mark and the mark of gear A as shown in Fig. 4-5. If the position is not correct, turn the worm [refer to "4.3 REMOVAL OF BELT A"] to obtain the correct position. Also, install arm A and arm B as shown in Fig. 4-6 and position the connecting rack as shown in Fig. 4-6 (refer to Ⓐ), seen from above.

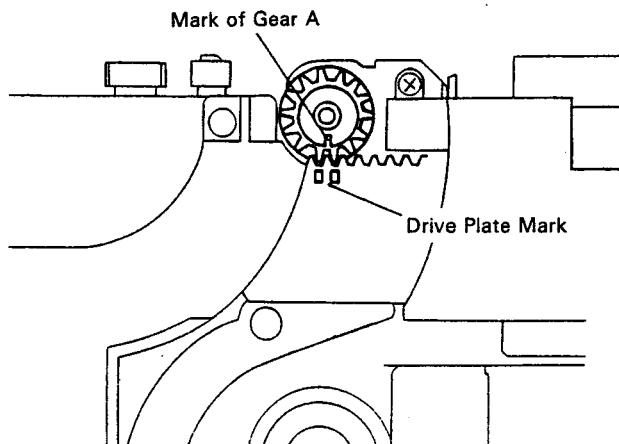

Fig. 4-5

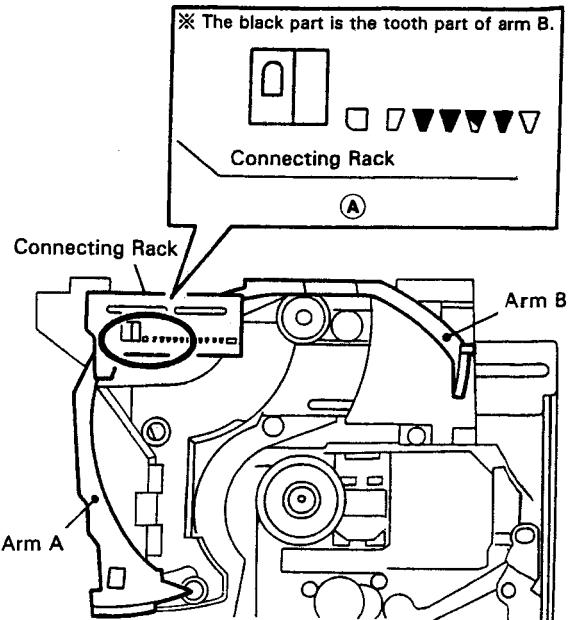

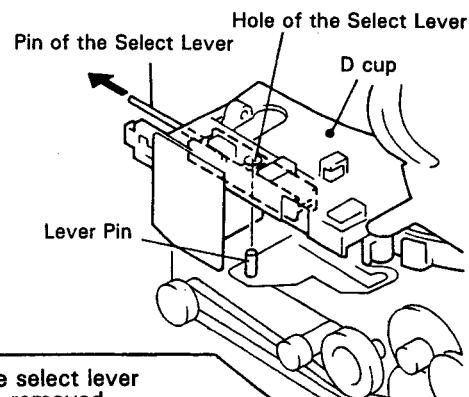

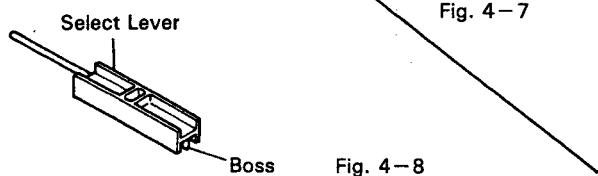

Fig. 4-6

● Select lever position matching

When installing the D cup, pull out the pin of the select lever and insert the lever pin into the select lever hole.

● When the select lever has been removed

Note: For installation of the select lever, insert it with the boss pointing down.

● Caution items for installation of the clammer base
Bring part ④ of the clamper base onto part ① of the stopper.

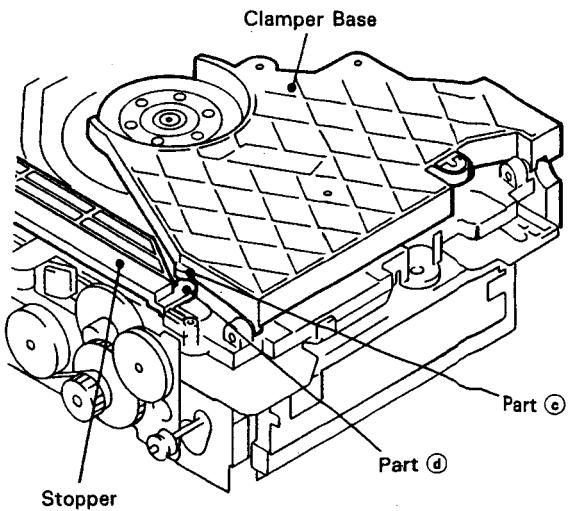

Fig. 4-9

4.3 REMOVAL OF BELT A

1. Remove the loading mechanism assy. [Refer to "4.1 REMOVAL OF LOADING MECHANISM ASSY".]
 2. Pull the synchro shaft together with the sub gear. (At this time, the synchro gear, the collar, and the timing belt come off together.)
 3. Remove the two screws ① fixing the gear angle A and remove the gear angle A. (At this time, the cord clamer also comes off.)
 4. Remove the washer fixing the gear A and the worm wheel and remove the belt A.
- If the work is difficult, remove the connectors (CN641, CN624) and cut the binder to make the work easier.

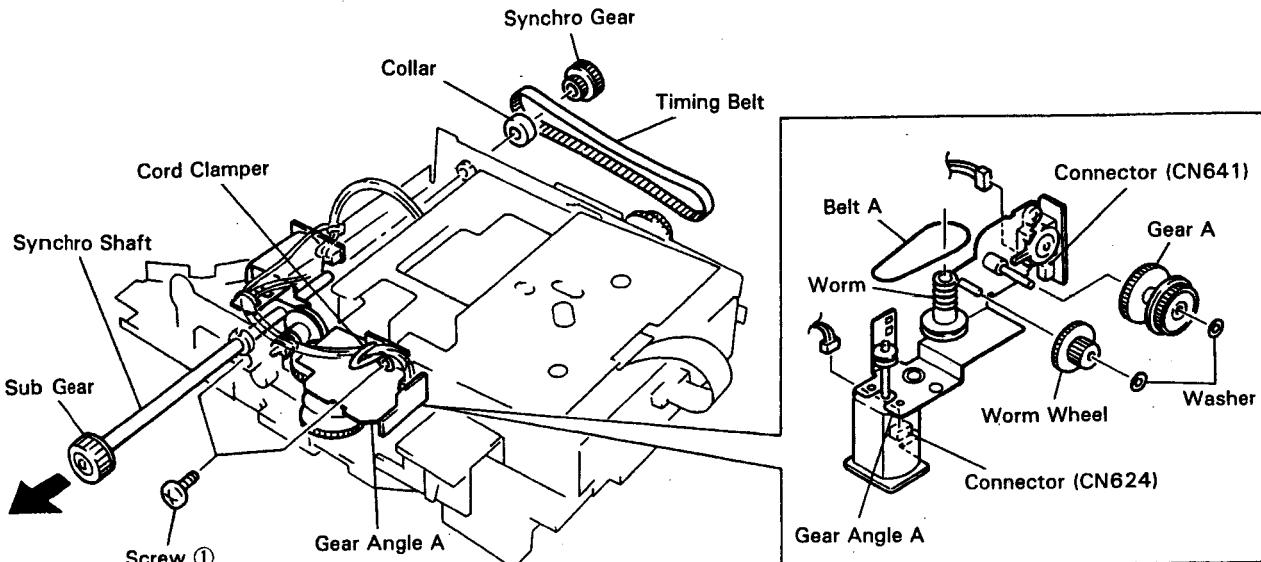

Fig. 4-10

Note) Execute assembly in reverse order of the disassembly.

However, the following items must be executed.

- **Synchronization matching for gear A and drive plate**

Match the drive plate mark and the mark of gear A as shown in Fig. 4-11, and then fix the gear angle A with the screws. (At this time, the lever of the loading switch must be on the upper side of the projection of gear A.)

- **Synchro belt installation**

Place the synchro belt as shown in Fig. 4-12 onto the synchro gear S. Place the collar onto the synchro shaft, place the timing belt onto the synchro gear, and press fit the synchro shaft in this condition.

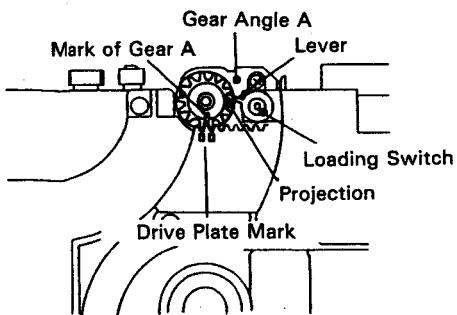

Fig. 4-11

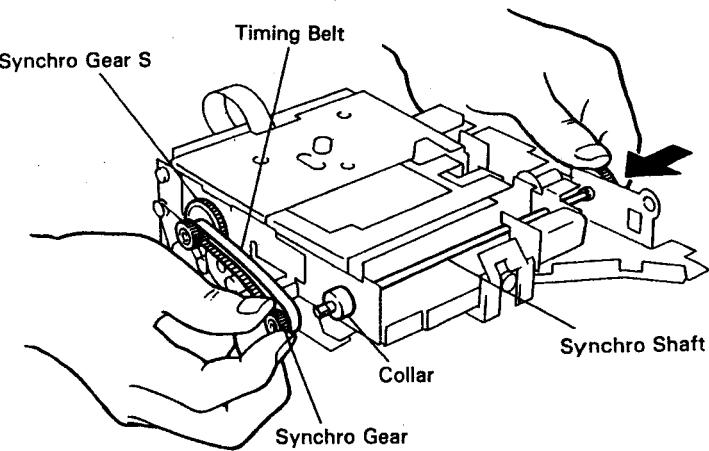

Fig. 4-12

5. EXPLODED VIEWS, PACKING AND PARTS LIST

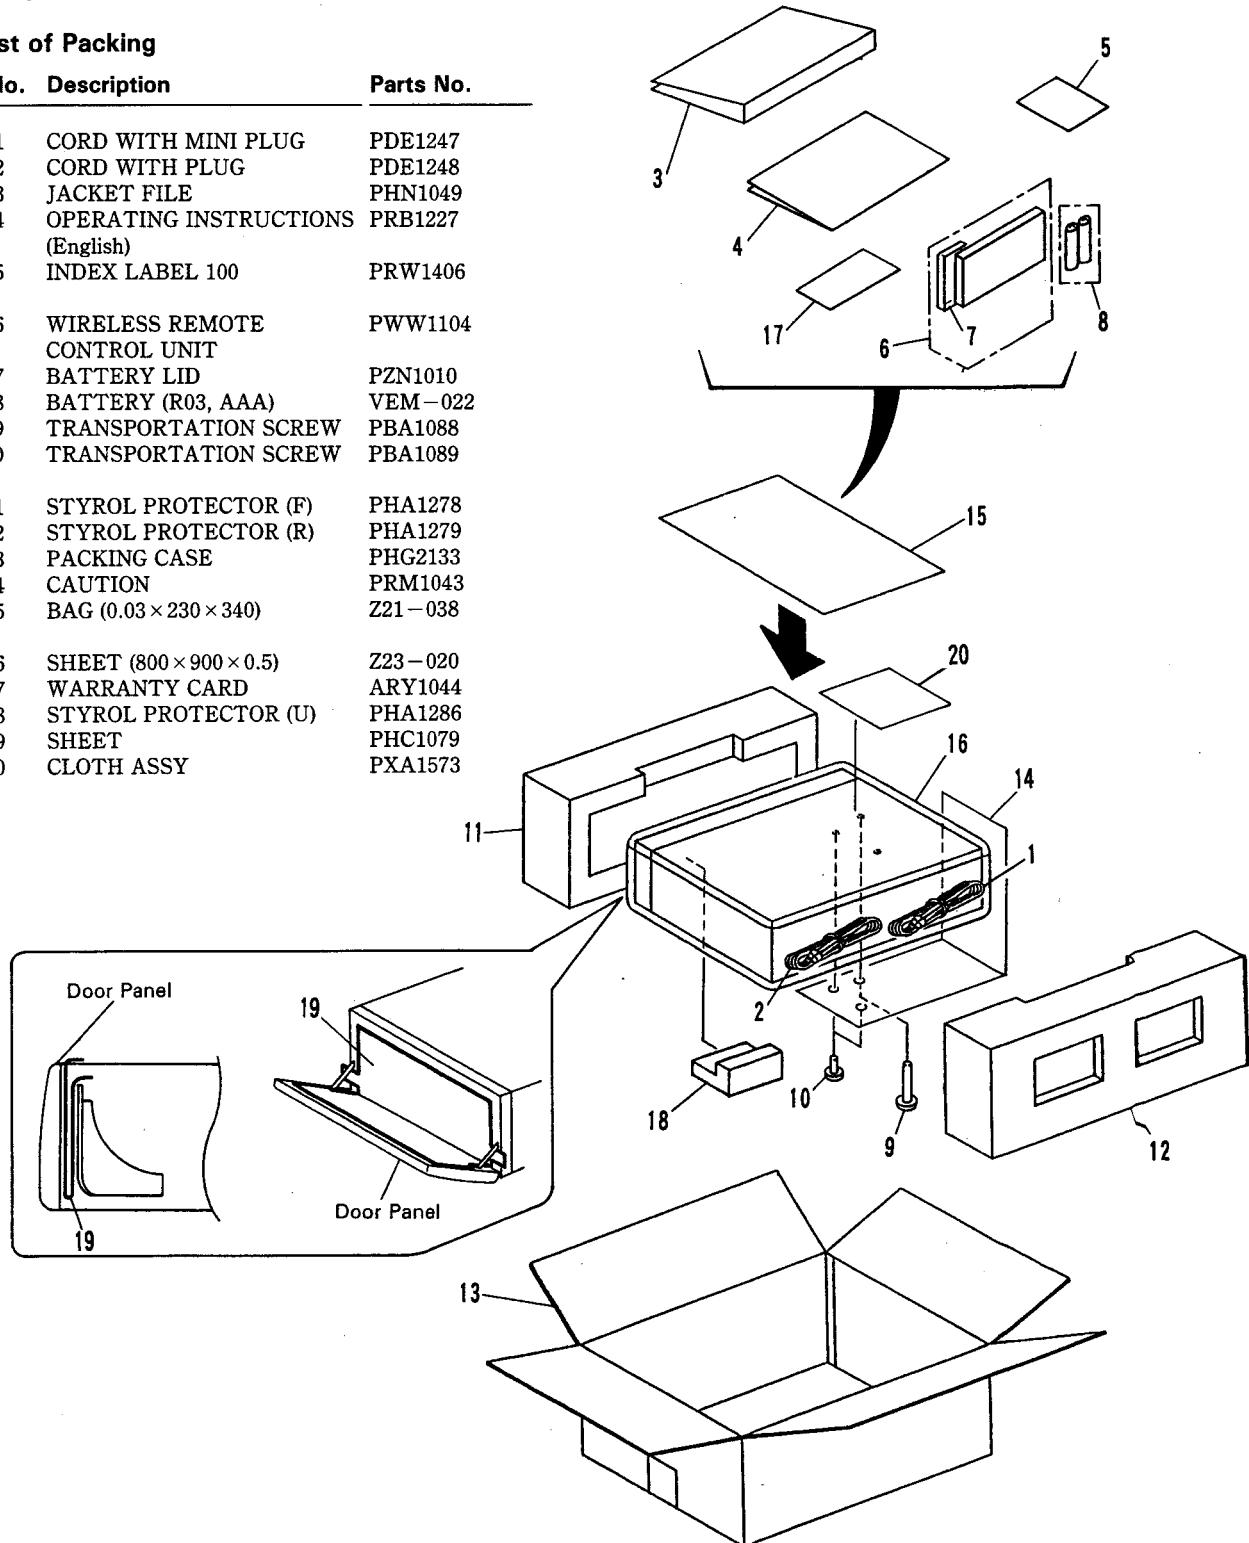

NOTES :

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The ▲ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

6. PCB PARTS LIST

NOTES :

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex. 1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

$560\Omega \rightarrow 56 \times 10^1 \rightarrow 561$ RD1/8PM 5 6 1 J

$47k\Omega \rightarrow 47 \times 10^3 \rightarrow 473$ RD1/4PS 4 7 3 J

$0.5\Omega \rightarrow 0R5$ RN2H 0 R 5 K

$1\Omega \rightarrow 010$ RS1P 0 1 0 K

Ex. 2 When there are 3 effective digits (such as in high precision metal film resistors).

$5.62k\Omega \rightarrow 562 \times 10^3 \rightarrow 5621$ RM1/4PC 5 6 2 1 F

7. OPERATING DESCRIPTION

7.1 POWER SUPPLY RECEPTACLE ON

When the mechanism is not at the home position when the power supply receptacle is switched ON, it will return to the home position, the mechanism will be clamped and stop will be executed with the following display.

The normal play mode will be <ALL> mode when no mode specification has been made.

Receptacle ON (DISC Display)

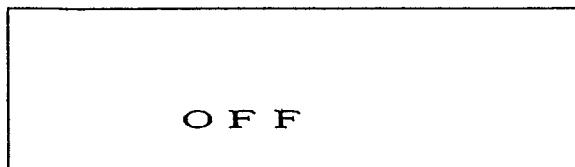

7.2 POWER ON/OFF (Product, Remote Control)

1. POWER-OFF

1. When the <POWER ON/OFF> key is pressed at the time of POWER ON, the entire FL will go out, and power OFF condition will be reached.
2. Except for the <POWER ON/OFF> key, all other keys are disabled during POWER OFF.
3. When the <POWER ON/OFF> key is pressed during PLAY, during SEARCH, etc., the operation will be stopped, the disc will be stored, the mechanism will return to the home position, clamping will be executed, and then the power will be switched OFF.

At this time, "OFF" is displayed at the 7-segment display to indicate that POWER-OFF is being executed.

During POWER-OFF

4. The play mode, the program, the customer, and the last disc are kept even when POWER OFF is executed.

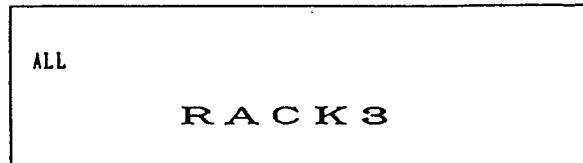

2. POWER-ON

1. When the <POWER ON/OFF> key is pressed at the time of POWER OFF, the FL will light, and all keys will be enabled.
2. The disc No. at the time of POWER OFF will be displayed, and when then the <PLAY> key is pressed, that disc will be searched and played. (Last Disc Memory specifications)
3. When the <TRACK-BACK> key is pressed within 1 sec. after POWER-ON, the business demonstration display will be started. When a key is pressed or the door is opened, the demonstration will stop, and the display returns to the original display mode.

7.3 DOOR AND ROLLING RACK OPEN

1. As play operation is continued even when the door is opened, disc exchange is possible even during playback, but as the rolling rack with the mechanism behind it can not be tilted, the discs in that rack can not be exchanged.
2. While the door is open, the number of the rolling rack which can not be tilted is displayed on the 7-segment display. (Only "RACK" is displayed when all racks can be tilted.)

With open door

(The number of the rack which can not be tilted is shown.)

3. When the door is opened during selection or loading the operation will be interrupted temporarily. The operation will be started again after confirmation that the door has been closed. Accordingly, when the <PLAY> key or the <RANDOM> key is pressed while the door and the rolling rack is open, play operation will not begin. Play will be started after confirmation that the door has been closed.
4. When a rolling rack is tilted, the disc existence information for that part, the program write information, and the random erasure information are cleared. (The customer writing information is not cleared.) When at this time all written information is cleared in <PROGRAM> mode, <ALL> mode will be entered.

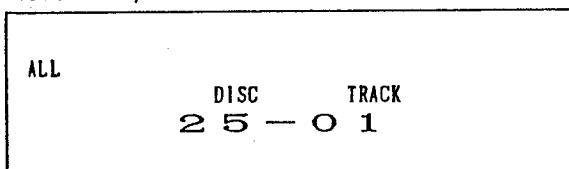

7.4 PAUSE (Product, Remote Control)

- When the <PAUSE> key is pressed during play, the PAUSE segment will light and pause will be executed at that location.
When the <PAUSE> key is pressed during search, pause will be executed at the search completion address.
- When skip title selection is executed in pause condition, pause will be executed at the search completion address.
- Pause is cancelled with the <PAUSE> key or the <PLAY> key.

7.5 STOP (Last Disc Memory specification) (Product, Remote Control)

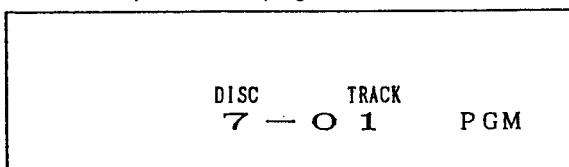

- When the <STOP> key is pressed during play, the number of the disc played immediately before will be displayed, the disc will be stored, the mechanism will return to the home position, clamping will be executed and stop condition will be reached.
- When the <PLAY> key is pressed again, the previously played disc will be searched and played (Last Disc Memory).
When a program has been set up, the number of the first disc in the program will be displayed, and when then the <PLAY> key is pressed, play will start from that disc.

<STOP> key ON

(The number of the disc played immediately before is shown.)

<STOP> key ON (with a program)

(The number of the first disc of the program is shown.)

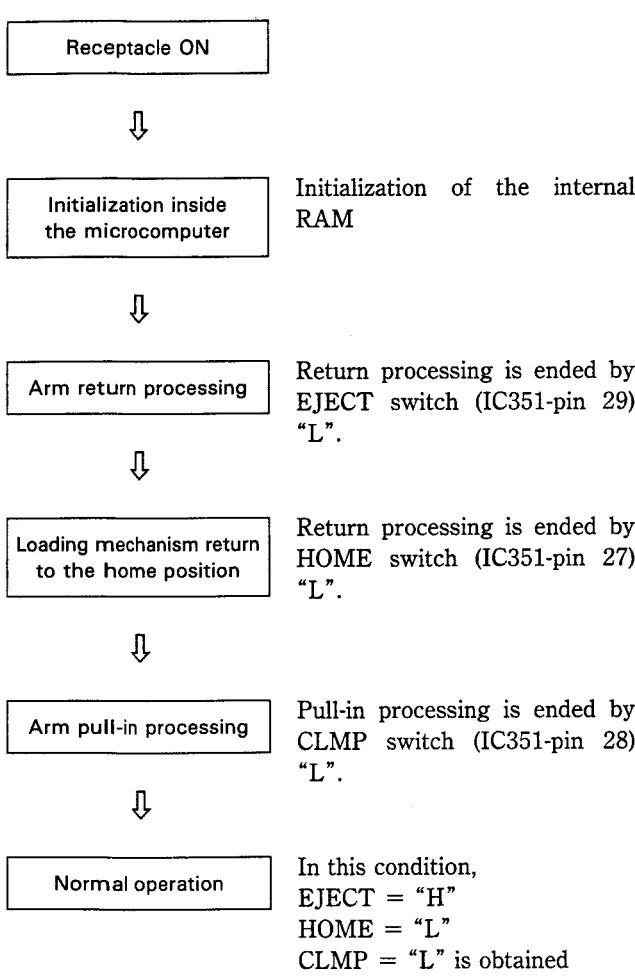

- Last Disc Memory applies for all modes, <ALL>, <SINGLE>, and <CUSTOM>. (However, this applies only for normal play.)
- When the <STOP> key is pressed during repeat or pause ON, repeat or pause also will be cancelled.
When the <STOP> key is pressed during stop in <PROGRAM> mode, <PROGRAM> mode will be cancelled (when a program has been written, this also will be cleared), and <ALL> mode will be entered.

7.6 LIST OF FL DISPLAY CHARACTERS

Display	Contents
OFF	Displayed after the POWER key has been pressed until standby status has been reached.
RACK *	Displayed when the door or the rack is open. * shows the number of the rack where the mechanism is (number of the rack which can not be opened).
RACK	When no number is shown, the mechanism is at the home position. All racks can be opened.
25 - no	Displayed when there has been no disc (Example: No 25th disc).
End	Displayed when manual search has been executed to the last disc.
PAUSE	Displayed when PAUSE PGM has been entered by PGM input.
P - **	Display of the entered PGM step when the TOTAL display has been set in PGM mode.
C1 - **	Displayed at the time of confirmation of the disc entered in custom mode. (C1 at the time of custom 1 check)

7.7 OPERATION FLOWCHART

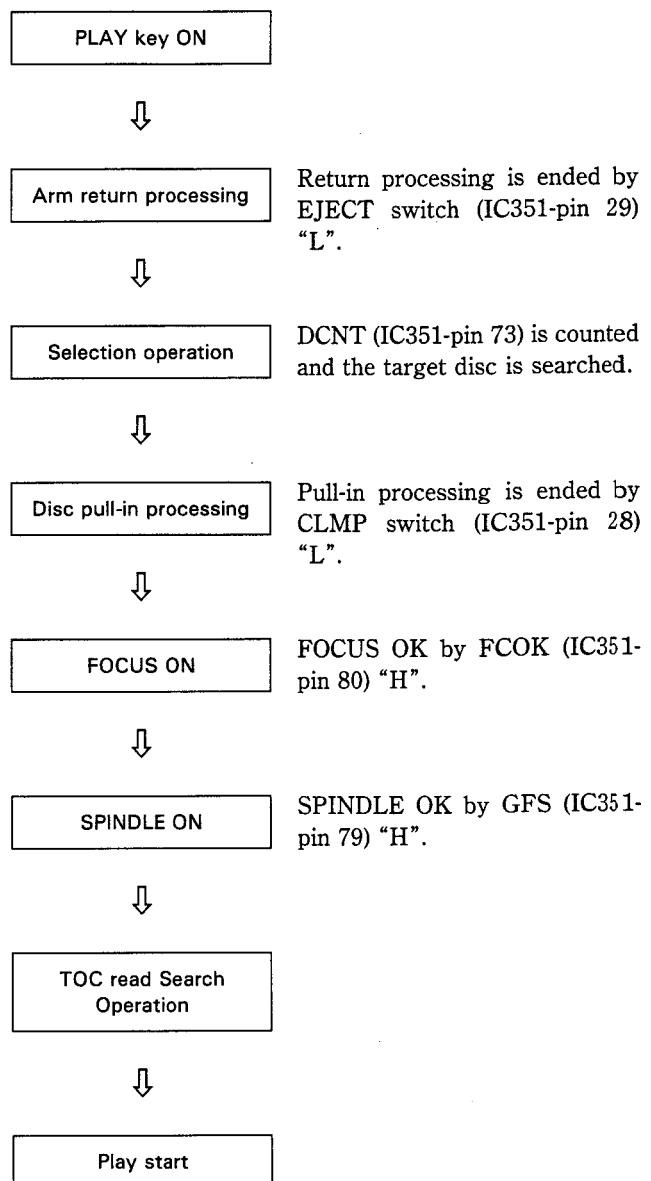

1. Sequence at the time of Receptacle ON

Afterwards, selection and playing is executed by input of the PLAY key etc.

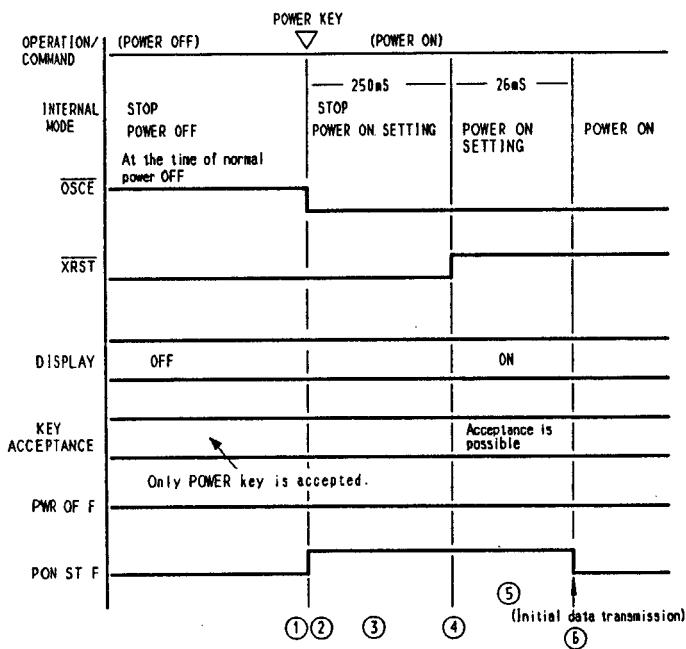

In case of NG for an operation, stop is executed at the respective position if the operation is not completed after several retries.

2. Sequence at the time of Setup (from Mechanism Home Position Standby)

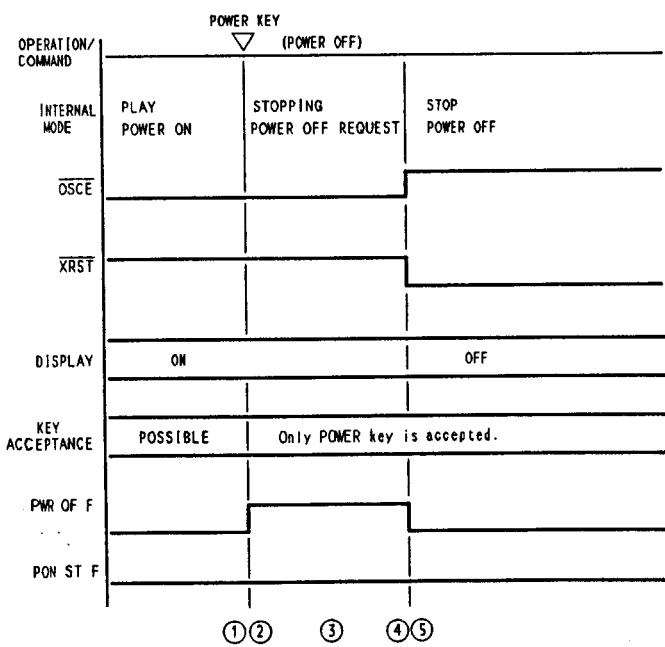

3. Power ON/OFF Sequence

1. OSCE, XRST timing and operation flags at the time of power OFF → power ON

- Press the POWER key for power OFF.
- OSCE = "L" (LSI oscillation permission) occurs immediately.
- Waiting for 250 ms.
- XRST = "H" (LSI reset cancellation)
- Waiting for about 26 ms.
- LSI initial setting is executed.

2. OSCE, XRST timing and operation flags at the time of power ON → power OFF

Data flow at the time of power OFF

In order to prevent run-away of mechanism, LSI, etc. during power OFF, the output of each output port is initialized as follows. Direction follow also is executed.

LDON "H"
 LOUT "L", LIN "L", DSRT "L", DSLT "L"
 STBL "H", XLAT "H", DLAT "H", MUTE "H"
 XRST "L", SYC3 "L", IN1 "L", OUT1 "L"
 MUTB "L", SCLK "H", DATA "H", CLOK "H"

8. ADJUSTMENTS

■ Adjustment Methods

If a disc player is adjusted incorrectly or inadequately, it may malfunction or not work at all even though there is nothing at all wrong with the pickup or the circuitry. Adjust correctly following the adjustment procedure.

● Adjustment Items/Verification Items and Order

If the specified values cannot be obtained or no adjustment is possible by performing the verifications or adjustments described in steps 1–4, the pickup block may be defective.

Step	Item	Test Point	Adjustment Location
1	Focus offset verification	TP1, Pin6 (FCS. ERR)	None
2	Tracking error balance verification	TP1, Pin2 (TRK. ERR)	None
3	Pickup radial/tangential direction tilt adjustment	TP1, Pin1 (RF)	Radial tilt adjustment screw, Tangential tilt adjustment screw
4	RF level verification	TP1, Pin1 (RF)	None
5	Focus servo loop gain adjustment	TP1, Pin5 (FCS. IN) TP1, Pin6 (FCS. ERR)	VR152 (FCS. GAN)
6	Tracking servo loop gain adjustment	TP1, Pin3 (TRK. IN) TP1, Pin2 (TRK. ERR)	VR151 (TRK. GAN)

● Abbreviation Table

FCS. ERR : Focus Error

TRK. ERR : Tracking Error

FCS. GAN : Focus Gain

TRK. GAN : Tracking Gain

FCS. IN : Focus In

TRK. IN : Tracking In

● Measuring Instruments and Tools

1. Dual trace oscilloscope (10 : 1 probe)
2. Low-frequency oscillator
3. Test disc (YEDS-7)
4. Low pass filter ($39k\Omega + 0.001\mu F$)
5. Resistor ($100k\Omega$)
6. 8cm disc (With at least about 20 minutes of recording)
7. Ball point hexagon wrench (GGK1002)
8. Standard tools

● Test Point and Adjustment Variable Resistor Positions

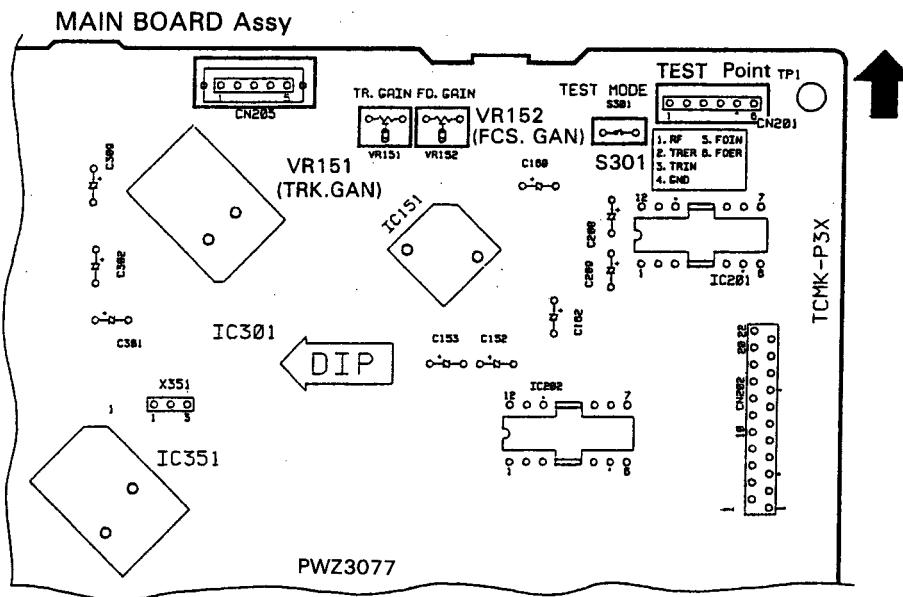

Fig. 1 Adjustment Location

● Notes

1. Use a 10 : 1 probe for the oscilloscope.
2. All the knob positions (settings) for the oscilloscope in the adjustment procedures are for when a 10 : 1 probe is used.

● Test Mode

These models have a test mode so that the adjustments and checks required for service can be carried out easily. When these models are in test mode, the keys on the front panel work differently from normal. Adjustments and checks can be carried out by operating these keys with the correct procedure. For these models, all adjustments are carried out in test mode.

[Setting these models to test mode]

How to set this model into test mode.

1. Unplug the power cord from the AC socket.
2. Push the test mode switch (S301). (See Fig. 1)
3. Plug the power cord back into the AC socket.

When the test mode is set correctly, the display is different from what it usually is when the power is turned on. If the display is still the same as usual, test mode has not been set correctly, so repeat Steps 1–3.

[Release from test mode]

Here is the procedure for releasing the test mode:

1. Press the STOP key and stop all operations.
2. Unplug the power cord from the AC socket.

[Operations of the keys in test mode]

Code	Key Name	Function in Test Mode	Explanation
	MODE	Closes focus servo after the disc is clamped.	<p>After the first disc is clamped, the laser diode is lit up and the focus actuator is lifted up, then lowered slowly and the focus servo is closed at the point where the objective lens is focused on the disc.</p> <p>With the player in this state, if you lightly rotate the stopped disc by hand, you can hear the sound the focus servo. If you can hear this sound, the focus servo is operating correctly. If you press this key with no disc mounted, the laser diode lights up, the focus actuator is pulled up, then the actuator is lowered and raised three times and returned to its original position.</p>
▶	PLAY	Spindle servo ON	<p>Starts the spindle motor in the clockwise direction and when the disc rotation reaches the prescribed speed (about 500rpm at the inner periphery), sets the spindle servo in a closed loop.</p> <p>Be careful. Pressing this key when there is no disc mounted makes the spindle motor run at the maximum speed. If the focus servo does not go correctly into a closed loop or the laser light shines on the mirror section at the outermost periphery of the disc, the same symptom is occurred.</p>
■	PAUSE	Tracking servo close/open	<p>Pressing this key when the focus servo and spindle servo are operating correctly in closed loops puts the tracking servo into a closed loop, displays the track number being played back and the elapsed time on the front panel, and outputs the playback signal.</p> <p>If the elapsed time is not displayed or not counted correctly or the audio is not played back correctly, it may be that the laser is shining on the section with no sound recorded at the outer edge of the disc, that something is out of adjustment, or that there is some other problem.</p> <p>This key is a toggle key and open/close the tracking servo alternately. This key has no effect if no disc is mounted.</p>

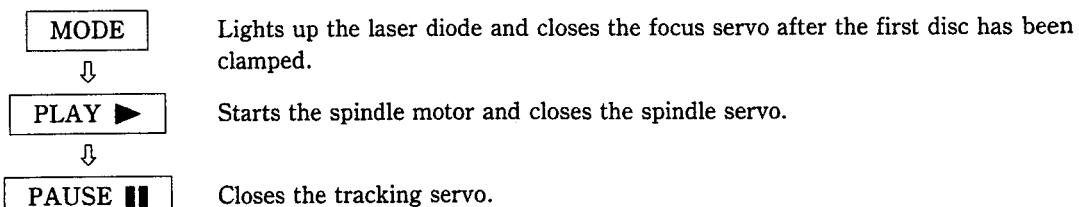

Code	Key Name	Function in Test Mode	Explanation
◀◀ • ◀◀	TRACK/ MANUAL SEARCH REV	Carriage reverse (inwards)	Moves the pickup position toward the inner diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation.
▶▶ • ▶▶■	TRACK/ MANUAL SEARCH FWD	Carriage forward (outwards)	Moves the pickup position toward the outer diameter of the disc. When this key is pressed with the tracking servo in a closed loop, the tracking servo automatically goes into an open loop. Since the motor does not automatically stop at the mechanical end point in test mode, be careful with this operation.
■	STOP	Stop	Initializes and the disc rotation stops. The pickup and disc remain where they are when this key is pressed. After this, return the disc to the rack and the mechanism back to its original position.

Note: Use the first disc in the test mode. (Other discs cannot be selected.)

[How to playback a disc in test mode]

In test mode, since the servos operate independently, playing back a disc requires that you operate the keys in the correct order to close the servos.

Here is the key operation sequence for playing back a disc in test mode.

Wait at least 2–3 seconds between each of these operations.

1. Focus Offset Verification

● Objective	Verify the DC offset for the focus error amp.		
● Symptom when out of adjustment	The model does not focus in and the RF signal is dirty.		
● Measurement Instrument Connections	Connect the oscilloscope to TP1, Pin6 (FCS. ERR) [Settings] 5mV/division 10ms/division DC mode	● Player State ● Adjustment Location ● Disc	Test mode, stopped (just the Power switch on) None None needed
[Procedure] Verify the DC voltage at TP1, Pin6 (FCS. ERR) is $0 \pm 50\text{mV}$.			

Note: If the specified values cannot be obtained or no adjustment is possible by performing the verifications or adjustments described in adjustment items 1–4, the pickup block may be defective.

2. Tracking Error Balance Verification

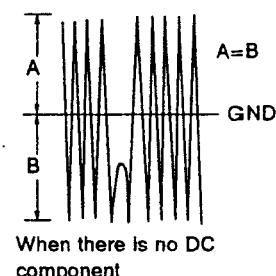

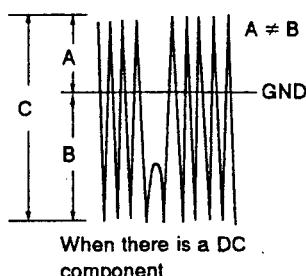

● Objective	To verify that there is no variation in the sensitivity of the tracking photo diode.		
● Symptom when out of adjustment	Play does not start or track search is impossible.		
● Measurement Instrument Connections	Connect the oscilloscope to TP1, Pin2 (TRK. ERR). This connection may be via a low pass filter. [Settings] 50mV/division 5ms/division DC mode	● Player State ● Adjustment Location ● Disc	Test mode, focus and spindle servos closed and tracking servo open. None YEDS-7

[Procedure]

1. Move the pickup to midway across the disc ($R=35\text{mm}$) with the TRACK/MANUAL SEARCH FWD ▶▶•▶▶ key or REV ▶◀◀•◀◀ key.
2. Press the MODE key, then the PLAY ▶ key in that order to close the focus servo then the spindle servo.
3. Line up the bright line (ground) at the center of the oscilloscope screen and put the oscilloscope into DC mode.
4. Supposing that the positive amplitude of the tracking error signal at TP1, pin2 (TRK. ERR) is (A) and the negative amplitude is (B), the following expression is satisfied.

$$\text{When } A \geq B, \frac{A-B}{C} \times \frac{1}{2} \leq 0.1$$

$$\text{When } A < B, \frac{B-A}{C} \times \frac{1}{2} \leq 0.1$$

3. Pickup Radial/Tangential Tilt Adjustment

● Objective	To adjust the angle of the pickup relative to the disc so that the laser beams are shone straight down into the disc for the best read out of the RF signals.		
● Symptom when out of adjustment	Sound broken; some discs can be played but not others.		
● Measurement Instrument Connections	<p>Connect the oscilloscope to TP1, Pin1 (RF).</p> <p>[Settings] 20mV/division 200ns/division AC mode</p>	<ul style="list-style-type: none"> ● Player State ● Adjustment Location ● Disc 	<p>Test mode, play</p> <p>Pickup radial tilt adjustment screw and tangential tilt adjustment screw</p> <p>8 cm disc [However, those with approx. 20 min of audio signal (music).]</p>

[Procedure]

1. Press the TRACK/MANUAL SEARCH FWD $\blacktriangleright\blacktriangleright\bullet\blacktriangleright\blacktriangleright$ key or REV $\blacktriangleleft\blacktriangleleft\bullet\blacktriangleleft\blacktriangleleft$ key to move the pickup to the external circumference of the disc.
Press the MODE key, the PLAY \blacktriangleright key, then the PAUSE $\blacksquare\blacksquare$ key in that order to close the respective servos and put the player into play mode.
2. First, adjust the radial tilt adjustment screw with the hexagon wrench (GGK1002) so that the eye pattern (the diamond shape at the center of the RF signal) can be seen the most clearly.
3. Next, adjust the tangential tilt adjustment screw with the hexagon wrench (GGK1002) so that the eye pattern (the diamond shape at the center of the RF signal) can be seen the most clearly (Fig. 3).
※ The ball-point type hexagonal wrench is used because the disc will get in the way if a normal hexagonal wrench is used.
4. Adjust the radial tilt adjustment screw and the tangential tilt adjustment screw again so that the eye pattern can be seen the most clearly. As necessary, adjust the two screws alternately so that the eye pattern can be seen the most clearly.
5. When the adjustment is completed, lock the radial and tangential adjustment screw.

Note: Radial and tangential mean the directions relative to the disc shown in Fig. 2.

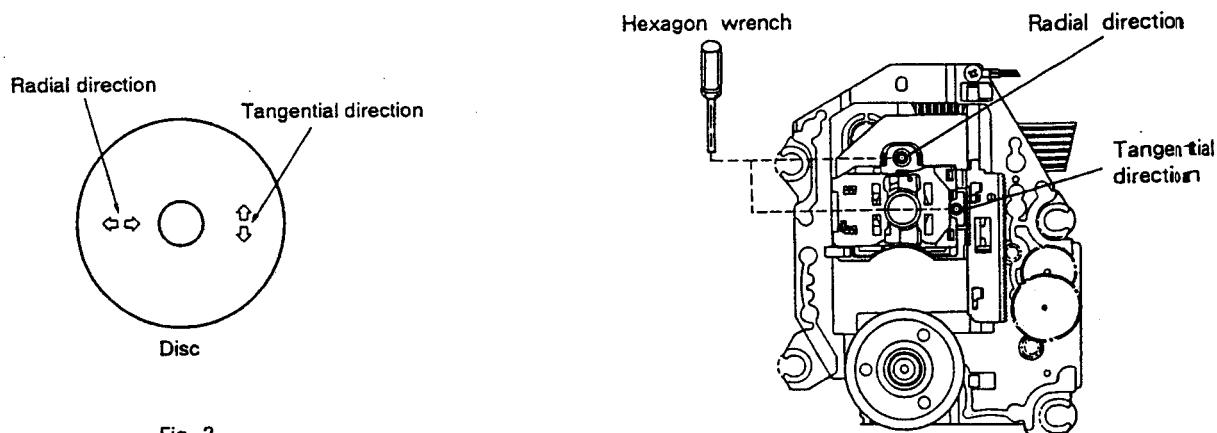

Fig. 2

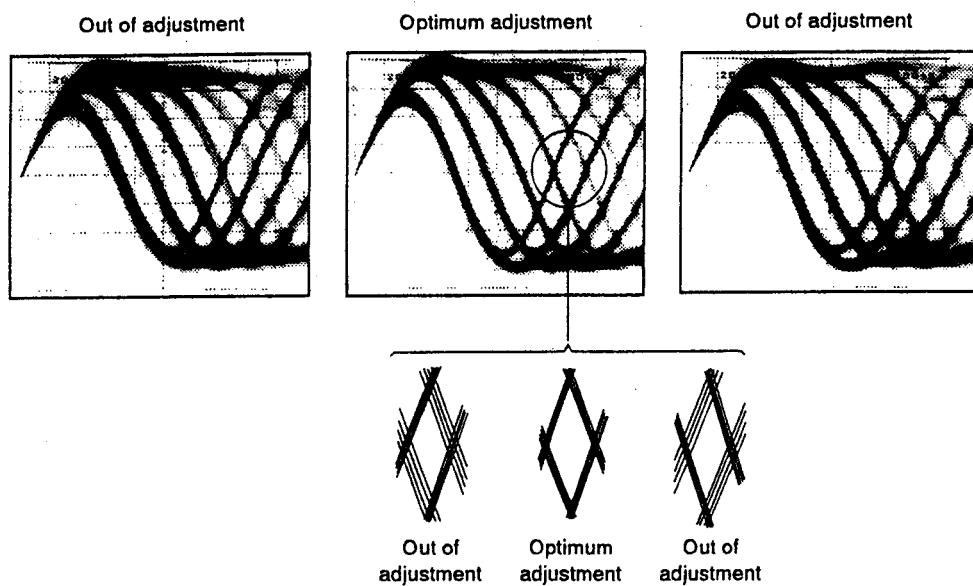

Fig. 3 Eye Pattern

4. RF Level Verification

<ul style="list-style-type: none"> ● Objective 	To verify the playback RF signal amplitude.		
<ul style="list-style-type: none"> ● Symptom when out of adjustment 	No play or no search		
<ul style="list-style-type: none"> ● Measurement Instrument Connections 	Connect the oscilloscope to TP1, Pin1 (RF). [Settings] 50mV/division 10ms/division AC mode	<ul style="list-style-type: none"> ● Player State ● Adjustment Location ● Disc 	Test mode, play None YEDS-7

[Procedure]

1. Move the pickup to midway across the disc ($R = 35\text{mm}$) with the TRACK/MANUAL SEARCH FWD $\blacktriangleright\blacktriangleright\bullet\blacktriangleright\blacktriangleright$ key or REV $\blacktriangleleft\blacktriangleleft\bullet\blacktriangleleft\blacktriangleleft$ key, then press the MODE key, the PLAY \blacktriangleright key, then the PAUSE $\blacksquare\blacksquare$ key in that order to close the respective servos and put the player into play mode.
2. Verify the RF signal amplitude is $1.2\text{Vp-p} \pm 0.2\text{V}$.

5. Focus Servo Loop Gain Adjustment

● Objective	To optimize the focus servo loop gain.		
● Symptom when out of adjustment	Playback does not start or focus actuator noisy.		
● Measurement Instrument Connections	See Fig. 4. [Settings] CH1 20mV/division X-Y mode CH2 5mV/division	● Player State [Settings] VR152 (FCS. GAN) YEDS-7	Test mode, play
	● Adjustment Location Disc		

[Procedure]

1. Set the AF generator output to 1.2kHz and 1Vp-p.
2. Press the TRACK/MANUAL SEARCH FWD $\blacktriangleright\blacktriangleright$ key or REV $\blacktriangleleft\blacktriangleleft$ key to move the pickup to halfway across the disc ($R=35mm$), then press the MODE key, the PLAY \blacktriangleright key, then the PAUSE \blacksquare key in that order to close the corresponding servos and put the player into play mode.
3. Adjust VR152 (FCS. GAN) so that the Lissajous waveform is symmetrical about the X axis and the Y axis.

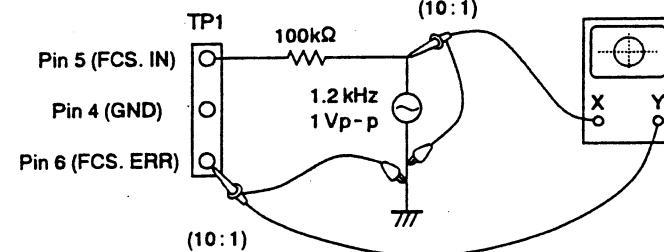

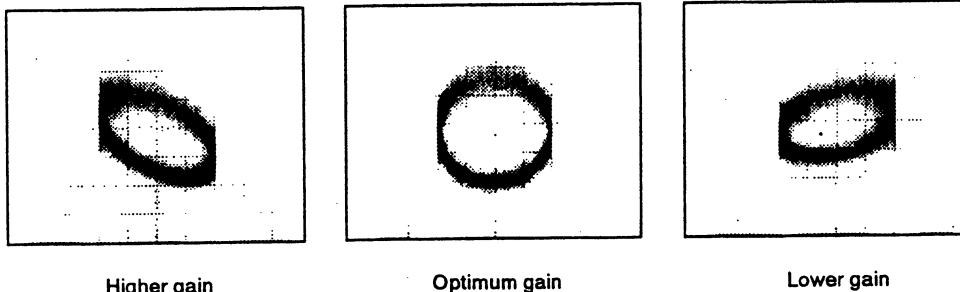

Fig. 4

Focus Gain Adjustment

Higher gain

Optimum gain

Lower gain

6. Tracking Servo Loop Gain Adjustment

● Objective	To optimize the tracking servo loop gain.		
● Symptom when out of adjustment	Playback does not start, during searches the actuator is noisy, or tracks are skipped.		
● Measurement Instrument Connections	See Fig. 5. [Settings] CH1 50mV/division X-Y mode CH2 20mV/division	● Player State [Settings] VR151 (TRK. GAN) YEDS-7	Test mode, play
	● Adjustment Location Disc		

[Procedure]

1. Set the AF generator output to 1.2kHz and 2Vp-p.
2. Press the TRACK/MANUAL SEARCH FWD $\blacktriangleright\blacktriangleright$ key or REV $\blacktriangleleft\blacktriangleleft$ key to move the pickup to halfway across the disc ($R=35mm$), then press the MODE key, the PLAY \blacktriangleright key, then the PAUSE \blacksquare key in that order to close the corresponding servos and put the player into play mode.
3. Adjust VR151 (TRK. GAN) so that the Lissajous waveform is symmetrical about the X axis and the Y axis.

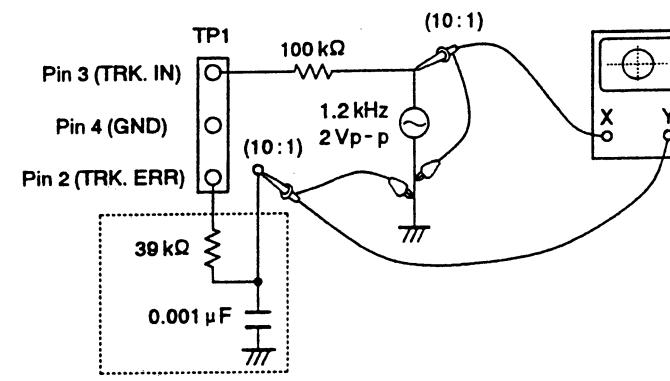

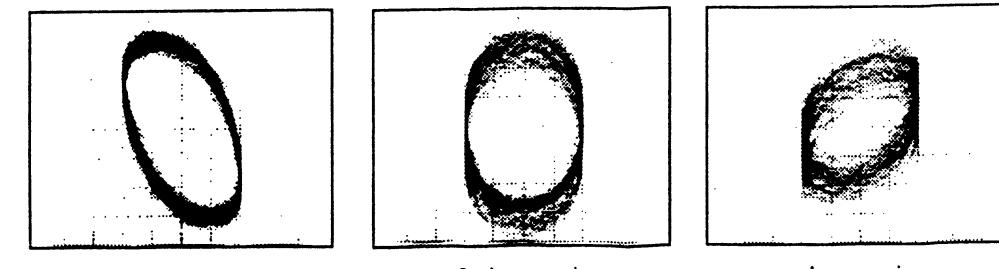

Fig. 5

Tracking Gain Adjustment

Higher gain

Optimum gain

Lower gain

9. SCHEMATIC AND PCB CONNECTION DIAGRAMS

9.1 MECHA BOARD ASSY, SENSOR BOARD ASSY, LOADING BOARD ASSY, SELECT MOTOR BOARD ASSY, LOADING MOTOR BOARD ASSY AND MECHANISM BOARD ASSY

SCH-1

A NOTE FOR SCHEMATIC DIAGRAMS (Type 4A)

- When ordering service parts, be sure to refer to "PARTS LIST OF EXPLODED VIEWS" or "PCB PARTS LIST".
- Since these are basic circuits, some parts of them or the values of some components may be changed for improvement.

3. RESISTORS:
Unit: kΩ, MΩ, or Ω unless otherwise noted.
Rated power: 1/4W, 1/6W, 1/8W, 1/10W unless otherwise noted.
Tolerance: (F): ±1%, (G): ±2%, (K): ±10%, (M): ±20% or ±5% unless otherwise noted.

4. CAPACITORS:
Unit: pF or μF unless otherwise noted.
Ratings: capacitor (μF) / voltage (V) unless otherwise noted.
Rated voltage: 50V except for electrolytic capacitors.

5. COILS:
Unit: mH or μH unless otherwise noted.

6. VOLTAGE AND CURRENT:
DC voltage (V) in PLAY mode unless otherwise noted.
mA or mA:
DC current in PLAY mode unless otherwise noted.
Value in () is DC current in STOP mode.

7. OTHERS:
• ○ or □ : Adjusting point.
• * : Measurement point.
• The Δ mark found on some component parts indicates the importance of the safety factor of the parts. Therefore, when replacing, be sure to use parts of identical designation.

8. SCH—□ ON THE SCHEMATIC DIAGRAM:
• SCH—□ indicates the drawing number of the schematic diagram. (SCH stands for schematic diagram.)

9. SWITCHES (Underline indicates switch position):
